

Statistical Arbitrage with Limit Order Book Imbalance

My goal is to establish and solve the stochastic optimal control problem that captures the momentum and order imbalance dynamics of the Limit Order Book (LOB). The solution will yield an optimal trading strategy that will permit statistical arbitrage of the underlying stock, which will then be backtested on historical data.

Progress Timeline

DATE	THESIS	STA4505
Dec 2014	• Complete CTMC calibration	
Dec 2014	• Backtest naive strategies based on CTMC	
Jan-May	• Study stochastic controls: ECE1639, STA4505	
Jun 5	• Establish models	Exam Study
Jun 12	• Establish performance criteria	Exam Study
Jun 15	• Derive DPP/DPE	EXAM
Jun 26	• Derive continuous time equations	
Jul 3	• Derive discrete time equations	
Jul 10	• Set up MATLAB numerical integration	
Jul 17	• Integrate functions and plot dynamics	Integrate and analyze
Jul 24	• Empty promises; zero fucks given	
Jul 31	• Code for numerical solutions, calibrations, plots	Simulate results
Aug 7	• All in-sample backtests	
Aug 14	• All out-of-sample backtests	
Aug 21	• The Big Writeup Effort	
Aug 24	• Submit first draft for review by panel	
Aug 28	•	Project Report
Sep 2	•	Presentation

Whiteboard Inspirational Quote of the Week

For Our Colleagues at Duke University...

Mon 10th: holy fuck two weeks today is the unofficial submission date.

Tue 11th: this morning i met up with Aerospace Adriana. she had texted me a couple days ago to say she was applying for the Forces, which i correctly guessed was for their aerospace engineering officer position, so i wanted to make sure she knew what she was getting herself into, what to expect from the application process and initially on joining, etc. turns out she literally knows nothing about anything. she didn't even bother really getting the job description, watching the little promo videos the CF has created for each job position. fucking idiot. but in other news she submitted her dissertation a month ago and her prof still hasn't even looked at it... so i dunno, i'm not even really that far behind then...

i dunno whether you bother flipping through my actual thesis pdf when i attach it, it's pretty long so i imagine you probably did the first time and now it's like "ehhh already seen it..." so maybe i ought to just tell you what's new in it? or just stop attaching it!

tentative meeting set up with Gabe for Monday morning. last i had talked to him, i hadn't even started doing the discrete time derivations. we're talking, i dunno, early July. holy fuck, i just realized that i've actually gotten a lot done. i still need a secondary examiner though. i contacted one prof by e-mail over the weekend and he has yet to reply, so next step will be dropping into his office, taking the foot in the door analogy to the next level.

Wed 12th: yesterday i found a file on my drive that i'd clearly written after attending some inspirational 'welcome to grad school, here is some advice' type lecture. i had made myself an ambitious fucking schedule that i never kept, set some goals that i never attained, and wrote down tips from that lecture. here they are:

- work around 50hrs/week
- have a to-do list for EVERYTHING with H M L
- study time/location free from disruptions
- handle things only once! reply right away or never!
- time journal, how time gets spent
- 10min each night to make to-do list for tomorrow
- study: 2-3h outside class for 1h inside
- study as soon after lecture as possible
- max 2h for one course at a time

in particular i was struck by this idea of taking 10min each night to make a to-do list for the following day. just struck me as a really solid idea. so i gave it a shot, left myself a little gedit

window open to find the next day, where i said good morning you little twat, here's what's on tap for today. and man, gotta say, i hit every single one of them, and today is definitely ranking number one in terms of crossing off items on the list below. i dig it. to boot, it's only 5:45pm and i can quite confidently call it a day!

oh, some other great news. one is that i've got my secondary examiner confirmed: Prof Chi-Guhn Lee from MIE. splendid. and the second is that Gabe confirmed our meeting for Monday at the Hot Oven Bakery by his place out west on Bloor and Royal York. i fucking love this bakery. shitty fucking diner coffee, and some of the BEST quiches and meat pies, at the best prices ever. i haven't delved into their baked goods yet, going to give it a shot this time. anyway, the meeting confirmation is good news for other reasons than my indulgence-to-be. I asked whether he wanted me to send over my updates beforehand, or just bring it on Mon, to which he didn't give a direct answer, suggesting he's fine with bringing it. the last thing he saw from me was a TMW from early July. there is absolutely no fucking way he's ready for the shit i'm about to drop on him, and that delights me.

Thu 13th: a splendid day today. woke up, stretched a bit, had the ol smoothie, rolled back into bed.

Fri 14th: i cannot fucking believe i'm looking at so many crossed-off items in the timeline on the first page. literally cannot believe. whereas i can believe it about the list on the last page. and i think this comes down to having lofty, broad items versus individual, very attainable items. today i can truly say i have learned first-hand what that means. i remember in SEALFIT training our man Cdr Mark Divine (and this is amazing that i can make this reference and we've both actually met the guy. nuts.) talks about how to get through the shitty times, like when you're fucking beat, tired hungry thirsty with no respite from those any time soon, sitting in the water, soaked, uncomfortable ... he says it's all about small victories. it's all about getting through one small little thing at a time and counting those wins. not telling yourself 'i am going to make it through this weekend,' but 'i am going to make it through the next 10 minutes of this task.' i feel like there's a strong analogy here.

but anyway, here we are man, in pretty top shape i dare say. everything is looking fucking good to make that Aug Two Four deadline. can't wait to get to writing some top grade bullshit commentaries on the various plots that are currently just deposited in the thesis. and then can't wait to have to revise the whole goddamn thing. **edit:** man that was some real optimism i had earlier this morning. just absolutely fucking beat now.

The Academic Week in Review

c.f. last week, I now unveil: 'a really solid todo list that i can look at and not have any individual thing be crazy daunting.'

- ~~in-sample backtest, same day calibration~~
 - ~~– re-run stoch tests to break out number of orders into MO/LO (nah fuck that)~~
 - ~~– reprint results table~~
 - ~~– plot EOD results~~
 - ~~– writeup~~
- ~~in-sample backtest, week offset calibration~~
 - ~~– finish running overnight backtest~~
 - ~~– print results table~~
 - ~~– plot EOD results~~
 - ~~– writeup~~
- ~~in-sample backtest, annual calibration~~
 - ~~– write script to produce annual calibration~~
 - ~~– run backtest ... should be pretty fast~~
 - ~~– print results table~~
 - ~~– plot EOD results~~
 - ~~– writeup~~
- out-of-sample backtest: 2014 data.
 - ~~– decide WHAT to run. best performer? probably annual calib is easiest, tho. justify.~~
 - ~~– also consider expanding the finite differences horizon T for more accurate results...~~
 - ~~– run backtest. 0.5h per strategy.~~
 - ~~– print results table~~
 - ~~– plot EOD results~~
 - ~~– writeup~~
- Dynamics of δ^\pm for continuous vs discrete time
 - ~~– produce plots comparing for different q, z values.~~
 - ~~– mimic Seb's four plots to show mechanics of the FOUR methods~~
 - ~~– writeup something intelligible about the plots~~
- Comparison of strategy performances
 - ~~– produce plot of performance for ONE DAY~~
 - ~~– writeup something intelligible about the plots~~
- General writing stuff
 - ~~– write introduction~~
 - ~~– write algo trading section~~
 - ~~– write LOB dynamics section~~
 - ~~– write ITCH data section~~
 - ~~– write intro to stochastic chapter~~
 - ~~– Link STA4505 project into dissertation with lead-in blurb.~~
 - ~~– re-write lead-in to continuous time section~~
 - ~~– re-write lead-in to discrete time section~~
 - ~~– write abstract~~
- any remaining time to proof-read the bitch
- **SUBMIT THE BITCH**
- write acknowledgement
- write dedication
- STA4505 project standalone write-up.
